

# ELECTRIC GUITARS & BASSES

# THE SUCCESS OF A CONCEPT

HOHNER instruments have earned themselves a secure place among the world's elite guitar brands.

HOHNER guitars and basses are available in more than 30 countrys around the world. By collaborating with innovators like Ned Steinberger, the american specialist in headless instruments, and pickup experts EMG of California, HOHNER has succeeded in building sought-after features like the DB Bridge and HOHNER/Select/EMG pickups into leading models in its line. The latest refinement for electric guitars is the ATN tone control system, for greater tonal versatility.

#### Steinberger Double Ball/Tuning System

- A. Bridge locks to fixed position.
- B. Individual fine tuning adjustment.
- C. Tremolo spring tension adjustment.
- D. Tremolo arm tension adjustment screw.
- E. String height adjustment.
- F. Bridge saddle lock adjustment.

Die HOHNER Instrumente haben sich einen festen Platz in der Spitzengruppe der führenden Gitarrenmarken erobert. Bereits in mehr als 30 Ländern werden HOHNER Gitarren und Bässe gekauft und gern gespielt. Durch die Zusammenarbeit mit Ned Steinberger (USA), dem Spezialisten für Headless Instrumente und EMG California wurden Features wie z.B. die DB Bridge bzw. die HOHNER/Select/EMG pickups bei einigen Modellen der Linie verwirklicht. Die neueste Verbesserung im Bereich E-Gitarre ist die ATN Klangregelung, die auf passiver Basis arbeitet und eine Vielzahl an unterschiedlichen Sounds ermöglicht.

#### Bass DB - (Detunable Bridge)

E-string can be pretuned to any desired note, ranging from E to low B.

## ATN Advanced Tonal Network

ATN is the latest development from HOHNER engineers. It offers three distinct advantages:

- The ATN is capable of reproducing (and redefining) the characteristic sounds of many of the most famous types of guitars in rock music – even including acoustic models.
- These sounds can be called up simply by adjusting the tone control. There is no arsenal of miniswitches or multifunction buttons to hamper the player's performance.
- For added convenience, this circuitry operates without batteries

# STANDARD BASS SERIES

## Pre-EQ'd Active

### Tone Control

The inner knob of the dual concentric control governs the treble response. Turn this control clockwise, and the high end is boosted, delivering extra „kick“. The outer ring determines the bass response. Turn it clockwise, and the low frequencies are boosted, adding more „punch“. The new active controls is switchable, which in combination with the adjustable preamp level allows the player to alternate between two different volume settings if required.
